

234CODE JOB DESCRIPTION

| Product Manager/QA | | |
|--|---------|---|
| | | |
| | | |
| JOB SUMMARY | | |
| <p>234Code is a Pan African Software development company that builds full stack applications for international companies across the globe at affordable prices. We provide experienced engineering teams to deliver high-quality outcomes on software projects.</p> | | |
| MAJOR RESPONSIBILITIES | | |
| <ul style="list-style-type: none"> • Translate product roadmap items and business requirements into detailed requirements for development by technical teams. • Communicate technical concepts clearly and at all levels of the stack (Frontend, backend, middleware, APIs) • Communicate clearly with client stakeholders, who could be CIOs of major enterprise companies, to ensure deliverability along the project's specifications • Excel at removing ambiguity from projects, setting up clear measures of success and carrying out decisive experiments • Define and maintain product/feature specs with inputs from all stakeholders. • Write user stories, as well as business cases and specifications for client design and development requirements • Ensure requirements are fully understood and that implementation plans match expectations. • Define success criteria for testing and product acceptance. • Identify blockers that will impact timeline, scope, cost or other project variables and escalate to the appropriate stakeholders. • Drive delivery of products and features. • Design test plans, scenarios, scripts, or procedures. • Document software defects, using a bug tracking system, and report defects to software developers. • Identify, analyze, and document problems with program function, output, online screen, or content. • Develop testing programs that address areas such as database impacts, software scenarios, regression testing, negative testing, error or bug retests, or usability. • Participate in product design reviews to provide input on functional requirements, product designs, schedules, or potential problems. • Document test procedures to ensure replicability and compliance with standards. • Plan test schedules or strategies in accordance with project scope or delivery dates. • Conduct software compatibility tests with programs, hardware, operating systems, or network environments. • Review software documentation to ensure technical accuracy, compliance, or completeness, or to mitigate risks. • Provide feedback and recommendations to developers on software usability and functionality. • Install, maintain, and guide use of software testing programs. | | |
| JOB REQUIREMENTS | | |
| Education | Minimum | Bachelor's degree in computer science, engineering, or any related field will be an advantage but not compulsory |
| Work Experience | Minimum | Minimum of 2 years of recent product management experience |
| Required Skills, Knowledge, and Abilities | | <ul style="list-style-type: none"> • Strong track record of project delivery for large, cross-functional projects. Experience in project delivery for clients, highly preferred • Excellent communication skills and intuition for communication strategy at every level -- within teams, with clients, with internal stakeholders, and other audiences • Demonstrated ability to gather user requirements and build a compelling and executable product vision • Ability to build confidence with stakeholders by maintaining an understandable roadmap • Detail-oriented with superior organizational skills to balance multiple projects and beat deadlines • Ability to Code Automated Tests using one or more automation tools including |
